#### INNOVATE COMPETE GROW

# Planning a Smart Manufacturing Roadmap

*Jeff Shook* | *September 27, 2023* 

### Mission

GENEDGE is Virginia's best public resource to help manufacturing and industry innovate, compete and grow.

#### Vision

To be Virginia's go-to resource that accelerates the growth of manufacturing and technology industrial clusters and quality jobs.

#### **Our Values**

- Work with integrity
- Work collaboratively
- Be inclusive
- Think creatively
- Positive results
- Always be learning and applying new knowledge

# Manufacturing Extension Partnership

- The MEP National Network<sup>™</sup> is a unique public-private partnership that delivers comprehensive, proven solutions to U.S. manufacturers, fueling growth and advancing U.S. manufacturing.
- Last year, MEP Centers:
  - interacted with 34,307 manufacturers,
  - leading to \$14.4 billion in sales,
  - \$1.5 billion in cost savings,
  - \$5.2 billion in new client investments,
  - And helped create or retain 125,746 jobs.

#### INNOVATE COMPETE GROW

#### Building a roadmap from Operational Excellence to Automation

Where is manufacturing today? What is the current status of automation? Why change? What to change What can be done for free (or less expensive steps) Steps to take to build a roadmap

If you don't know where you are going, you might wind up someplace else. -Yogi Berra

## Challenges for Small Manufacturer's (SMM's)

Capital limitations Workforce constraints Daily firefighting Supply chain challenges Commodity pricing Poor information or lack of...

#### 2022 CESMII Smart Manufacturing Survey

# Question: What challenge(s) has your company encountered while pursuing a SM strategy?

- 1. Lack of skilled talent
- 2. Cost required to implement
- 3. Complexity of system integration
- 4. Lack of technical expertise
- 5. Time required to implement
- 6. Lack of clear investment benefits (ROI)

### The Problem with predicting the future...

Sometimes progress is slower than expected.

How is your road trip progressing?

1969 GM Ad.

And you'll be able to drive cross-country without a road map and never get lost. Just leave the guiding to ERCS. The Electronic Route Guidance System developed cooperatively by General Motors Research Laboratories and the Comparison's Dalco Badia Dissioned to the Statement of the Stateme

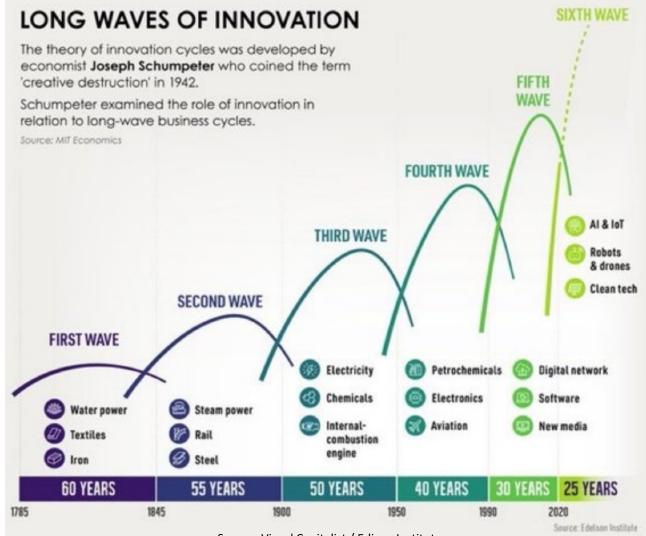

And you'll be able to drive cross-country without a road map and never get lost. Just leave the guiding to ERGS: The Electronic Route Guidance System developed cooperatively by General Motors Research Laboratories and the Corporation's Delco Radio Division.

## Innovation is occurring faster and faster

#### INNOVATE COMPETE GROW

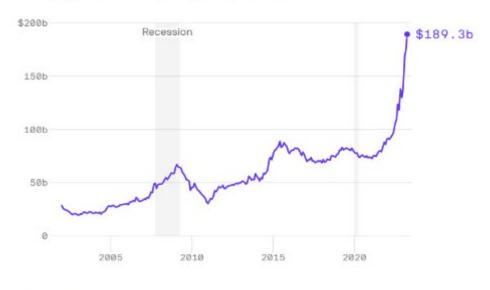

Pager Mortgage Photographs Mail Pit stop Order-ship Loan approval Processing Delivery Car service 3 wks -> 2 hrs 6 wks -> 15 min 2 wks -> 1 hr 1 wk -> 17 hr 4 min -> 20 sec

### Manufacturing Sea Change

Level of Investment is record setting – US funded & Foreign investment Boomers are aging out of workforce Lack of young people interested in Manufacturing as a career Automation and AI in other non-manufacturing sectors

Seasonally adjusted annual rate; Monthly; January 2002 to April 2023

Manufacturing construction spending

"Ongoing labor shortages, easierto-use robotic solutions and new industries embracing robotics, such as restaurants, retail, construction and even agriculture, have led to record units sold here in North America this year," said Jeff Burnstein A3

Data: Census Bureau; Chart: Axios Visuals

Current estimates suggest the semiconductor industry will add 115,000 jobs in the next seven years. Can the U.S. workforce meet the demand? – Semiconductor Industry Association (SIA)

#### **Automation Definitions**

Automation Vs. "Smart Manufacturing" Process industries or Discrete manufacturing Types of Robots (Industrial vs. Collaborative) Robots as a service

Automation / Vision Systems / (Machine learning & Artificial Intelligence) Incorporating all 3 technologies will disrupt traditional manufacturing in the next 5 years!

Teach Pendent

Tablet

Phone App

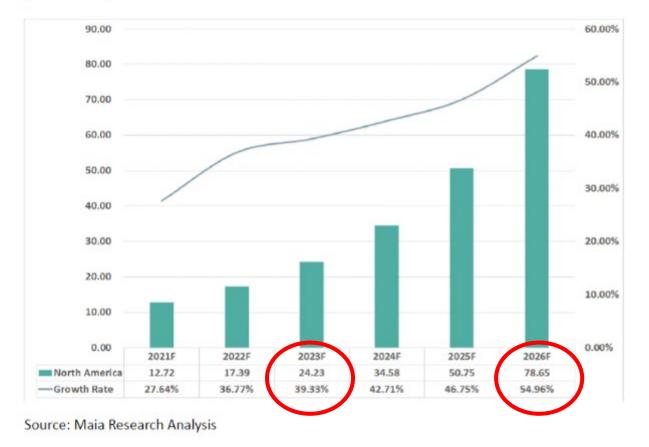

How will these changes affect you?

#### **Automation Trends Cobot Market**

٠

# Figure North America Collaborative Robot Consumption (K Units) and Growth Rate (2021-2026)

- All Robots: 35,804 units Jan-sept 2022 \$1.875B (A3)
  - 24% increase over 2021 same time period

# **Cobot Capability and Application growth**

September IMTS – UR announces 20kg Cobot

#### October – Yaskawa announces 30kg Cobot (66 lbs!)

## Keyence

#### A wide range of detection tools for various targets and applications

New built-in	tools				
			Blob count		
Tools					
$\checkmark$					æ
Outline	Color area	Area	Color average	Brightness average	Edge pixels
Ì	$\overline{\mathbf{O}}$			123	<b>-í</b> -í
Width	Diameter	Edge presence	Pitch	OCR	Color/ brightness prohibit
Position adjust	tment tools				· · ·
Position adjustment		High-speed position adjustment	<u>₽</u> ₽	NEW Multi-positi adjustment	

#### Examples of machine vision

### What does AI, Vision, and Robotics look like?

Robotic poultry handling.

Automates an unpleasant and fast paced job

#### INNOVATE COMPETE GROW

#### Where is automation being deployed?

Greet travelers, usher them to ticket counters, bag claim, gate assistance, and carry baggage.

Agriculture applications allow for labor savings of mundane tasks. Can operate longer hours.

#### 'They're awesome': Golden Corral restaurant has two robotic workers

A restaurant in West Virginia has two robots who help out with the dishes.

#### Where are cobots being applied?

- Human food service professional
  - Each staff member can require months to teach and train
  - Have many "re-teaches" to hundreds of staff each time you wish to update or change recipes
  - Turnover / finding employees

- Collaborative Robot
  - Update menu / prep procedures / recipes whenever you want
  - One "training" / new recipe can be implemented across all restaurant chain immediately

#### Where are you currently? Traditional Performance monitoring

No Cadence or measurement to operations Lack of validated measurement system makes best practice a matter of opinion Maintenance of equipment coincides with reports of smoke Improvements difficult to detect due to no baseline performance No clear tie between operational performance and financial results

Resources are often used to fight fires reflexively End of Month results Manufacturing & Quality engineers crunch performance metrics Accountants tally the hours Results are combined and reviewed

"A problem well defined is a problem half-solved." John Dewey

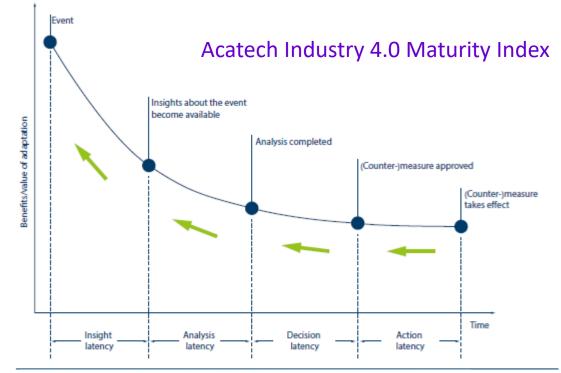

#### What is your current response process?

An event occurs..

Diagnose to identify what has happened

Triage, sort, rework... Full Counter measure

	5.00.000 */	1 ( ) ( ) ( ) ( ) ( ) ( ) ( ) ( ) ( ) (	1.11 1.11 1.11
			1111 1111 inte
	1-111 	P.D. HULLE	

**The acatech** NATIONAL ACADEMY OF SCIENCE AND ENGINEERING

#### What is the Time to Resolution?

How much effort is extended? How many meetings and discussions around potential resolutions Scrap, rework, MRB???

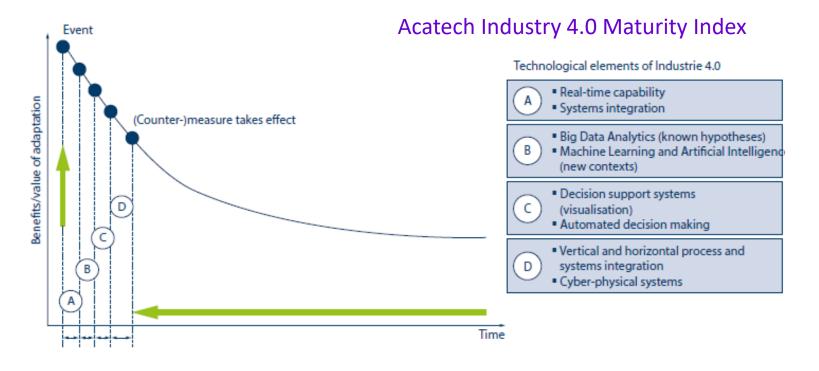

Figure 3: How organisational learning increases the value of an adaptation (source: FIR e. V. at RWTH Aachen University)

# SCIENCE AND ENGINEERING

## What does Industry 4.0 look like?

#### An overview

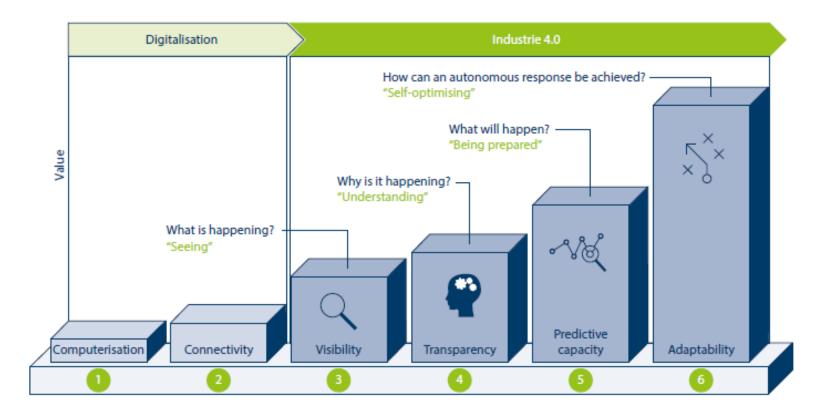

Figure 6: Stages in the Industrie 4.0 development path (source: FIR e. V. at RWTH Aachen University)

acatech NATIONAL ACADEMY OF SCIENCE AND ENGINEERING

#### Where is the opportunity? – Understanding the Current State

Revisiting the problem – How to identify the opportunity? Data collection – What data do you have? Timeliness – When is it collected / analyzed ? Data visualization – Can it be interpreted? Data integrity – Accuracy of the data?

<u>Helpful sources of data</u>: Routings / Labor standards Process maps Value stream maps Quality system data Maintenance requests Customer feedback

<u>KPI's</u>: OEE FTY / FTT Production Downtime On-Time Delivery

### Where is the Waste?

We tend to focus our improvement attention on the work that we "see" Example: a manual assembly operation, or a machine. Because that is where the "work" is. We desire to make an operation more efficient We tend to ignore material moving, sitting, waiting... Often new equipment and processes only deliver small impact.

We could work on making the soldering process faster, or more efficient. It may be the correct thing to improve the process, yet it did not improve customer lead times. Focus on the Non-Value Added!

By identifying the Waste!

#### What about the workforce?

We will need to think about and plan for training the workforce for this new technologies.

Creating a learning culture will help adoption when investing in newer technologies. Examples include: standard work, team based, 5S, adaptable

Lean tools and Process Improvement are foundations for building successful automation.

#### Where to start the journey to Automation?

Leadership Commitment! Identify champions (Jonah's) Understand the commitment Understand the goals and common vision Be realistic about the journey

## Where to start? - What can be fixed for free?

Address what you can control – A few examples Involve your team! Communicate, communicate, communicate! Attitude is free! Sort, Set in Order, Shine, Standardize, Sustain! Implement visual management & Standard work

Teach, Train, Lead Become a learning organization. Involve your people, Grow your champions Establish a culture of continuous improvement Build a culture that can support automation Be open to change

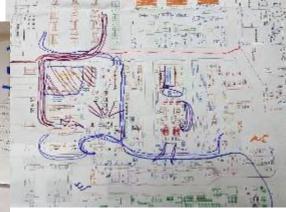

#### What are some of the ways SMM's improve their bottom line?

Employee engagement Through: 5S or 6S culture Lean training Value Stream Mapping Waste out / 2 second lean Waste walks Employee suggestion system Kaizen or rapid improvement events

#### How Lean Organizations evolve

#### **First Steps**

Education - Leadership, broad employee or lean specialist				
55	18%			
Value Stream Mapping (VSM, process mapping	16%			
Kaizen events	13%			
Eliminate 7 Wastes (TIMWOOD)	7%			
Problem solving (A3,KATA,5 Whys,root cause)	6%			
Flow (Kanban, one piece, pull)	6%			
Leadership (alignment, lead by example)	5%			
Standardized Work	5%			
Visual management (Andon)	4%			
Gemba Walks	3% -			
Policy Deployment (Hoshin Kanri)	3% -			
Goal and direction setting	3% `			
Tracking (KPIs, scorecards)	2%			
Communicate the lean program	2%			
Test and Learning Cycle (PDCA)	1%			
High Performance Teams (collaboration)	1%			

#### Lessons from Lean Reimagined

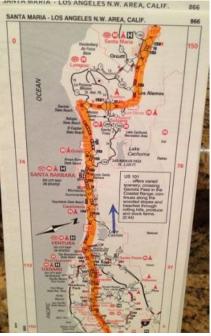

#### Longer-term

shifts to	Employee engagement and recognition in daily practice	23%	
	Problem solving (A3,KATA,5 Whys,rc	17%	
	<ul> <li>Value Stream Mapping (VSM, proces</li> </ul>	11%	
<u>``</u>	Flow (Kanban, one piece, pull)	11%	
	Visual management (Andon)	9%	
	Eliminate 7 Wastes (TIMWOOD)	8%	
``.	5S	8%	
``	<ul> <li>Standardized Work</li> </ul>	8%	
· · · ·	<ul> <li>Tracking (KPIs, scorecards)</li> </ul>	6%	
~	<ul> <li>Leadership (alignment, lead by exam</li> </ul>	6%	
`	🔪 Kaizen events	4%	
· · · · ·	Line Balancing (Level scheduling)	3%	
	High Performance Teams (collaborat	2%	
	🗅 Gemba Walks	2%	
	Policy Deployment (Hoshin Kanri)	2%	
	Test and Learning Cycle (PDCA)	1%	

#### What comes next?

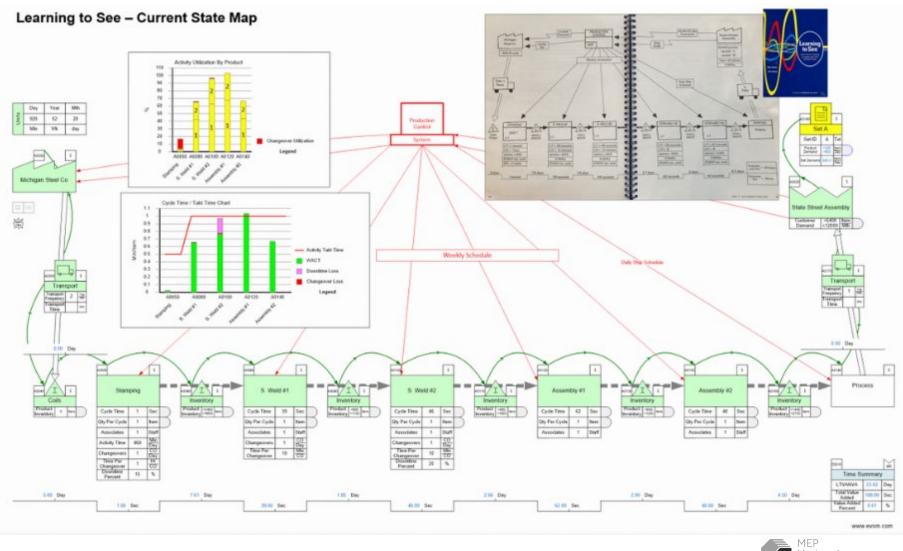

Identify the value stream Listen to VOB and VOP Alignment of KPI's Match current manufacturing processes to latest technologies Use assessments and benchmarking to help identify best practice Build an ideal (perfect) future state map Estimate the ROI Create a plan Assemble a team Create specifications for automation equipment Remain flexible!

## **Map the Process**

- Level 0 No maturity.
- Level 1 Awareness of digital technologies and processes and their applicability
- Level 2 Trialing digital technologies and processes
- Level 3 Some application of digital technologies and processes
- Level 4 Substantial application of digital technologies and processes and achieving operational benefits
- Level 5 Full maturity with widespread application of digital technologies and processes and achieving operational benefits and significant competitive advantage

\* Caveat. Occasionally, it is ok to jump directly to automation

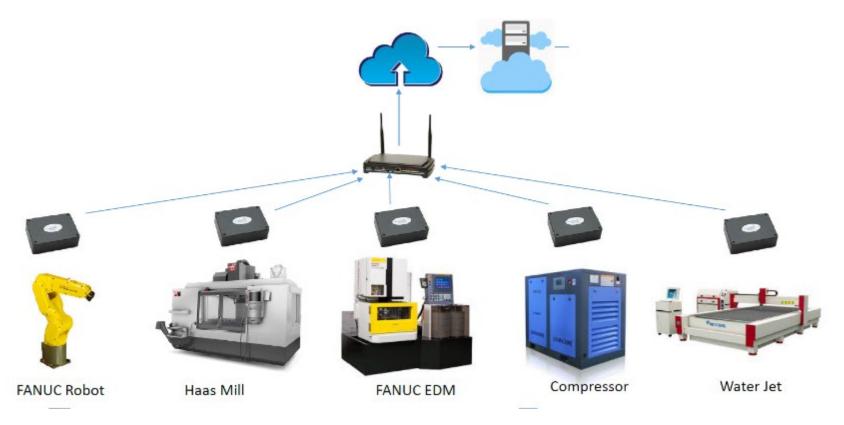

Replacement for old equipment or safety Clearly a jump in process throughput or step in quality

When specifying new equipment be sure to address the technology features.Does it fit your strategy?Will you incorporate the new features?Like buying a new car and not using the latest technologies.

## **Edge Computing**

Part of the roadmap may include how to tie equipment together.

## **Open Platform Communications Unified Architecture**

#### **Collaboration** Domain Specific Information Models

The OPC Foundation closely cooperates with organizations and associations from various branches. Specific information models of other standardization organizations are mapped onto OPC UA and thus become portable.

The Industrial Interoperability Standard™

# **Questions regarding IOT / Cloud**

- Standard in the hardware and sensors underway. But how is the software compatibility to run dashboards, notifications?
- What data should be captured? What should be stored on cloud?
- How do you tie data back to ERP?
- Do you allow and share access to internal sensors?
  - Equipment company monitoring your equipment for maintenance?
  - Allow customers to track their orders, or download quality measurements?
- What is the open software architecture for the current to next 5 years look like?
- Will it merge with hardware to provide efficient, low-cost shopfloor data, and connection of entire business and supply chain?

#### Implement the roadmap

By this time, you have addressed waste in the system Workforce has transformed to a learning organization Clearly understood goals and objectives Choice automation is identified, and ROI is understood A project team manages An implementation plan is followed Training and start up is part of the deliverable!

Update your maps! The future state becomes the current state.

*Identify next opportunity!* 

# **Thank You!**
